

PAEDIATRIC VACUUM MATTRESS Rescue Kid 2: vacuum mattress with integrated harness

Product description:

Paediatric vacuum mattress with integrated harness

- For the safe transport of a child on an ambulance stretcher.
- From newborns to children aged 6 to 7 years (125m).
- Quick attachment to the stretcher.
- Optional carry bag.
- In red/blue polyurethane.
- Dimensions : 135 X 60 cm.
- Weight : 3 kg.
- 5 coloured polypropylene straps.
- 2 support straps and 2 harness straps.
- Guarantee : 5 years.

Description

Rescue Kid 2 with balls.

The paediatric vacuum mattress with integrated sling is intended for the safe transport of newborns and children. It is therefore the most complete device for adapted paediatric transport and immobilisation.

The strong points :

Innovative design, easy to use, easy to clean.

Innovative design: Robustness and optimal technicality

Thanks to the system of compartments of the balls, the rescuer does not have any distribution to make. This saves precious time in the care of the victim. 100% highly resistant polyurethane (triple layer) and welded at high

frequency: a blue side in contact with the victim and a reinforced red side for laying on the ground. Extremely robust, with very small diameter, weighted and non-porous styropore beads, this MID is designed according to a patented manufacturing process of compartments (otherwise known as "bead channelling") which guarantees a homogeneous distribution over the entire mattress structure. This MID completely envelops the victim without any shrinkage. The paediatric vacuum mattress with integrated harness is suitable for both infants and children aged 6-7 years (from 50 to 125 cm). X-ray, CT and MRI compatible.

Equipped with an automatic valve in ABS, there is no need for any manipulation during the procedure.

Quick and easy to use:

The Rescue Kid 2 is quickly attached to the stretcher with 5 black attachment straps. Each strap is adjustable and has quick release buckles. The red base of Rescue Kid 1 is quickly attached to the stretcher with 5 attachment straps. Each strap is adjustable and has a metal safety buckle, which is fitted directly to the stretcher frame.

To facilitate installation, each type of strap has its own colour. This makes it easy to identify the type of strap used on the stretcher: black for the straps used to attach the device to the stretcher and blue for the holding straps.

Safe and suitable transport:

The Rescue Kid is equipped with a safety harness consisting of 2 holding straps with a quick release buckle.

Easy disinfection :

Completely welded at high frequency, the MID Pediatric is designed without any seams, thus facilitating cleaning and disinfection. In addition, all accessories, such as handles, straps and valve, can be removed for cleaning and disinfection. Maintenance is easily done with soapy water and disinfection is easy. This MID can also be machine washed at 60°C with a special cap to replace the valve.

Traceability:

The Rescue Kid 2 has a unique serial number, which ensures traceability over time. It can also be custom marked (name of the establishment, department, telephone number, logo, barcode...) for a clear identification of its owner.

The mattress is delivered ready to use. Additional accessories are available on our website: vacuum pumps, transport bags etc.

Technical characteristics :

Materials: 100% Polyurethane.

Number of positioning pins for accessories: 10.

Colour: red/ blue.

Shape: rectangular.

Dimensions : 135 X 60 cm.

Weight : 3 kg.

5 coloured polypropylene straps.

2 support straps.

2 harness straps.

Usable from -30°C to +70°C.

Warranty: 5 years.

Class I medical device.

CE mark.
