

**MRI CERAMIC SCISSOR BLACK**  
**MRI-CERTIFIED SCISSORS with a 4,5 cm blade**

**Product description:**

Non-magnetic universal scissor made of ceramic with total length 12 cm

These scissors feature advanced ceramic blades, which will never rust, pit or corrode, making them ideal for moisture-prone environments.

Their long-lasting sharpness is achieved by the hardness, straightness and precise alignment of the advanced ceramic blades.

Typically half the weight of traditional scissors, they are astonishingly light, sharp and wear-resistant.

Nonmagnetic and nonconductive, the blades feature safety blunting and proper alignment.
