

## BABYFIX COCOON

### Safe and Careful MRI scans of Newborns weighing between 2 and 5 kg

### Product description:

MRI scans for newborn babies are not an everyday occurrence and pose special challenges for everyone involved due to the difficulty of achieving safe and stable positioning. To meet the high demands of this procedure, the **BabyFix Cocoon** was developed in close collaboration with experts from the fields of neonatology, anesthesia and pediatric radiology.

**The BabyFix Cocoon** accomplishes ideal conditions for a safe and careful examination procedure for newborn babies in the MRI scanner.

### Improved Image Quality

Stable, stretched and centered positioning of the baby's head and body possible without any problems, even in narrow coils

### Increased Patient Safety

Permanent monitoring of vital functions through an integrated viewing window and simple routing and strain relief for monitoring cables via an in-built hose stopper.

### Optimized Workflows

Easy to use and intuitive enabling routine-based work in interdisciplinary teams.
