

## KRYSTAL STERILE ULTRASOUND GEL High-viscosity sterile ultrasound gel in single-dose sachets

### Product description:

**Krystal sterile ultrasound gel** is a **high-viscosity gel** designed to improve ultrasound wave transmission and ensure **optimal contact between the probe and the patient's skin**. It contributes to obtaining **uniform, high-quality ultrasound images**.

Its **fragrance-free** and **non-irritating** formulation is suitable for demanding medical use. It is also designed to **preserve the integrity of ultrasound probes**, which are regularly exposed to contact gels and disinfecting products.

### Sterility and safety of use

The use of sterile gel in sachets helps **reduce the risk of cross-contamination** during examinations. Krystal gel features **double packaging** to maintain sterility until use.

Each single-dose sachet contains **20 ml** of ultrasound gel, allowing **fast, precise application without excess**.

- Transparent gel
- Hypoallergenic
- Water-soluble

### Applications

Krystal sterile gel is suitable for **all ultrasound examinations**, as well as **surgical procedures and invasive interventions** with a high risk of cross-contamination.

It is recommended to use a **disinfection solution approved by ultrasound equipment manufacturers** before

applying the gel to the ultrasound device.

### **Packaging**

Krystal sterile gel is supplied in **boxes of 48 single-use sachets**, featuring:

- Pre-cut easy opening
- Long shelf life of up to **3 years**
