

EDM PREMIUM NON-STERILE CLEAR ULTRASOUND GEL High-viscosity contact gel for ultrasound imaging

Product description:

EDM Premium ultrasound gel is a **non-sterile, high-quality contact gel** manufactured in France, developed to ensure **optimal contact between the patient and the ultrasound device** during medical imaging examinations.

This **clear gel** features a **high viscosity**, supporting **efficient transmission of ultrasound waves** and contributing to consistent image quality.

Formulation and skin tolerance

EDM Premium is formulated for intensive medical use. Its composition is designed to provide **good skin tolerance** and comfortable use, including during prolonged examinations.

- Non-corrosive
- Fragrance-free
- Water-soluble
- Neutral pH
- Hypoallergenic
- Non-irritating to the skin

Its **non-greasy formula** is intended to **preserve the surface of ultrasound probes**, even during repeated and long-term use.

Packaging and use

The semi-rigid bottles allow **precise gel dispensing with each press**. They are equipped with a **clip-on cap** that

is easy to clean and designed to **reduce gel residue around the opening**.

It is recommended to **clean the ultrasound device with an appropriate disinfection solution** before gel application and after the procedure, carefully removing any visible residue.

Available packaging

EDM Premium ultrasound gel is available in several packaging options, depending on usage requirements (see available variants).

Packaging: 24 x 250 ml, Cubitainer 5 L, 48 x 250 ml
