

MINI MRI SCANNER MOCKUP Mini MRI Scanner with realistic sound output

Product description:

Takes away the fear of the MRI examination procedure for the youngest patients and explains the upcoming MRI examination playfully.

Results:

- Increase in image quality, no motion artefacts, optimal images on the first scan.
- Increase in the number of examinations, additional 2-3 patients per day.
- Increased return on your MRI investment (ROI-Return of Investment).

The Mini MRI is a mockup of the Siemens Healthineers MAGNETOM Sola MR system.

It has the same proportions as the original MRI scanner, plus a sliding table top that can be manually slid in and out of the 'magnet opening'.

In addition, the Mini MRI has two buttons that can be used to play the pre-recorded sounds of three different MR sequences.

One button is used to play the sounds of 'normal' MR sequences, the other to play the sounds of Siemens Quiet Suite sequences.
