

LEGHOLDER RX® STANDARD ANKLE SUPPORT POSITIONER

High-quality plastic ankle support, latex-free, radiolucent and easy to clean

Product description:

The Legholder RX®CE is a leg positioner designed to maintain the leg and foot during orthopedic surgical procedures, particularly for knee surgery. It easily attaches to the operating table and is fully radiolucent for use under medical imaging. It is compatible with sterile draping and does not require sterilization.

The device is made of robust, non-allergenic plastic, easy to clean with standard disinfectants. The fastening straps are included with the Legholder RX®CE and can be provided in short or long versions upon customer request, without additional cost.
