

LEGHOLDER RX® FUSION LEG POSITIONER
Radiolucent Ankle Support — Fusion model, high-quality plastic, ergonomic support, MRI compatible.

Product description:

The Legholder RX® Fusion is a leg positioner designed for orthopedic knee surgeries. It ensures optimal stabilization while being radiolucent, facilitating medical imaging. The Fusion model differs from the standard model with less pointed lateral nubs and slightly reinforced brackets, offering enhanced support and safety.

Easy to attach to the operating table, the Legholder is compatible with sterile draping and does not require sterilization. It is made of high-quality, latex-free plastic and is resistant to standard disinfectants.

The straps are available in short or long versions upon customer request, with no additional cost.
