

## MRI PULSE OXIMETER

**MRI-compatible pulse oximeter with fiber optic sensor and compact design**

### Product description:

The **MRI pulse oximeter** is specifically designed for use in MRI environments. With a combination of indicators — pulse strength bar, separate tones for pulse and oxygen saturation, and a pulse quality indicator — it allows for quick and complete patient monitoring.

Its unique flat profile makes it suitable as a tabletop unit or portable device, with its dedicated **carrying case**. The oximeter has a battery life of at least **16 hours**, a **charging time of only 4 hours**, and memory to store **70 hours** of data.

Flexible alarm management is available, including **patient safety mode** and user-defined standard settings. Thanks to its **fiber optic sensor and cable**, it prevents high-frequency burns or image artifacts.

Compatible with **fixed or mobile MRI systems**, it is suitable for **infants, toddlers, and adults**. The device can be positioned inside the MRI room outside the **200 Gauss line**.

### Best suited for:

- Samples
- Continuous monitoring
- Patient transport

Longueur cable oxymetre: 6 meters, 9 meters
