

MAVIG BR119 X-RAY PROTECTIVE GLASSES
Plastic frame, frontal protection 0.75 mm Pb

Product description:

Frontal protection against scattered radiation

The **MAVIG BR119 X-ray protective glasses** provide **frontal protection against scattered radiation equivalent to 0.75 mm Pb**, suitable for medical environments exposed to X-rays. They combine a high level of protection with excellent wearing comfort.

Ergonomic and lightweight frame

- Frame made of **highly durable synthetic material**.
- **Curved lenses** for enhanced frontal coverage.
- **Padded temple ends** for improved comfort.
- Low allergy risk due to carefully selected materials.

Comfort and daily medical use

- **Optimised balance** between lightweight frame and robust lead glass lenses.
- Design aimed at **minimising injury risk**.
- **Easy cleaning** and high resistance to disinfectants and chemicals.
- **Soft retaining strap** included for improved stability.

High-quality lenses and optical corrections

MAVIG exclusively uses **high-quality X-ray protective lenses**, ensuring:

- Excellent **light transmission**.
- High **break resistance**.
- Uniform **X-ray absorption**.

This model supports **prescription lenses**:

- Single vision
- Bifocal
- Progressive

Technical data and compliance

- Lead equivalent: **0.75 mm Pb** (frontal protection, 50–150 kV).
- Compliant with **IEC 61331-1:2014** and **IEC 61331-3:2014**.
- **Universal size.**
- Approximate weight: **65 g**.
- Available colours: **silver** or **black**.

Usage advice

For improved comfort and stability, the use of the **supplied strap** is recommended. It distributes the weight more evenly and prevents pressure on the nose while keeping the glasses securely in place.

Color: Black, Grey

Lead equivalent: 0,75 mm Pb

Glasses - correction: Without, Unifocal, Bifocal, Progressive
