

X-RAY PROTECTIVE GLASSES WITH LEADED LENSES
Front protection 0.75 mm Pb and lateral protection 0.50 mm Pb - non-prescription solution

Product description:

The **X-ray protective glasses with leaded lenses** provide a **cost-effective and reliable solution** for healthcare professionals exposed to ionising radiation in regulated environments. Designed without optical correction, they ensure effective protection while maintaining a **wide field of vision**.

The **mineral leaded lenses** offer high scratch resistance and allow easy daily cleaning. The **reinforced plastic frame** is lightweight, robust and hypoallergenic, ensuring **comfortable wear** during extended use.

Radiation protection is provided by a **lead equivalent of 0.75 mm Pb at the front** and **0.50 mm Pb at the sides**, effectively covering the main areas of eye exposure. The glasses are supplied ready for use with essential accessories.

Main features
