

STERILE UNIVERSAL MICROSCOPE HANDLE COVER Pack of 2 sterile covers with velcro closure - 15 × 36 cm

Product description:

The **sterile universal microscope handle cover** is designed to effectively isolate microscope handles in the operating room and help prevent cross-contamination. It allows the handles to be covered, protecting them from the environment, staff and patient contact.

Each cover features an **oval end** and an **open end with 2 velcro fastening straps**, ensuring easy application and secure positioning on the handle. The product is supplied in a **sterile pouch of 2 covers**.

Designed for **single use**, this **Class I sterile medical device** is sterilized using **ethylene oxide**. It is **latex-free**, **phthalate-free** and contains **no animal or biological-derived materials**.
