

PROFOAM PLATE - RECTANGULAR POSITIONING PAD Hygienic foam positioning pad for medical imaging

Product description:

The **ProFoam Plate** is a **rectangular positioning pad** designed to provide stable and comfortable patient support during medical imaging examinations.

Made from **dimensionally stable ProFoam foam**, this positioning aid is fully **encased in a welded polyurethane film**, ensuring **optimal hygiene** and excellent resistance to repeated disinfection procedures.

Thanks to its robust design and easy-to-clean surface, the ProFoam Plate is suitable for regular use in hospital and clinical environments, including areas with high infection control requirements.

Available in **firm or soft foam**, it allows the level of support to be adapted according to the required positioning and patient comfort.

Key features:

- Rectangular positioning pad made of ProFoam foam
- Dimensionally stable structure, resistant to deformation
- Welded polyurethane coating for maximum hygiene
- Easy cleaning and disinfection without residue
- Available in firm or soft foam versions
- Suitable for use across multiple imaging modalities

Dimensions:

25 × 18 × 5 cm
