

ROLLBOARD Transfer board (MRI compatible)

Product description:

Rollboards play an important part in many areas of healthcare. They are being used wherever dependent people need to be transferred and moved a lot, for example in clinics, radiologies or nursing homes. All Transaroll Board models are the result of continuous re-development and improvement, and have been tested and approved by many professionals in the field. Discover the solution best suited for your needs.

The new core of the Transaroll Silverboard consists of one piece of polyethylene is is therefore very stable and has a carrying capacity of up to 350 kg. The robust nylon fabric ensures highest gliding properties and therefore the most comfortable and hygienic patient transfer of all times.

Size Standard: 180 x 50 cm (+/- 3%), foldable only
