

MRI HEARING PROTECTION FOR CHILDREN FROM 3 YEARS OLD
These noise canceling headphones are designed for attenuating medium to high volumes.

Product description:

It is particularly effective in the area of high pitched and harmful hearing noise levels from 1000 cores.

Average isolation: 25 decibels (SNR)

This item is recommended to be used with the appropriate earplugs for children.
 Find them here: [MRI disposable child earplugs](#)

Nevertheless, it lets through a whole series of signals and speech, so that one is not completely cut off from the environment.

The padding is very soft. It is not only comfortably seated, but the coating also provides good sound insulation.

The headband has extra padding, so there is no pressure point on the head, even if the earmuffs are worn for a long time.

In addition, the height of the capsules can be adjusted, so that it fits both small and large heads.
