

**MRI EAR PROTECTION - RADIOLUCENT**  
**Protects patient hearing and reduces MRI scanning noise**

**Product description:**

**Noise reduction rating of -27 dB**

- Ear Muffs are made completely of plastic and composite materials that are invisible to MRI scanner
- Helps to quiet the MRI gradient knocking sounds for patients who have trouble with noise
- Excessive noise can be harmful, cause anxiety and may lead to hearing loss
- These ear muffs can calm MRI patients and less motion translates to better scan image quality
- Inert to the MRI scan and will not produce any MRI artifacts
- Can be used with scan sound's sanitary stretch headphone cover
- MRI patients will especially appreciate your going out of your way to provide comfort from the medical imaging sound made by your MRI scanner
- Separate sideways and height adjustment of the shell
