

BODY-CONTOURED MOBILE RADIATION SHIELD MAVIG WD261 Height-Adjustable

Product description:

The compact, anatomically formed shield allows for a close body fit so that the doctor can move freely throughout the procedure.

Due to springs the user can adjust the height of the shield to his own height or working position requested, at any time i.e. also during the procedure.

The shield was designed to offer sufficient legroom in order to eliminate any risk of injury.

The unimpeded use of the control pedal of the x-ray unit accounts for another advantage.

- Lead equivalent Pb 0.50 mm
- Easy to clean outer material
- Designed for easy and comfortable control pedal use
- High quality, electrically conductive wheels with brakes
- Specially designed sterile covers to meet strict hospital hygienic regulations

Can be handled at any time used with the special sterile disposable covers
