

KRYSTAL COVER – NON-STERILE LATEX ENDOCAVITARY PROBE COVER

Non-sterile latex protection for endocavitary ultrasound probes

Product description:

The **KRYSTAL COVER non-sterile latex probe cover** is designed for examinations performed with **endocavitary ultrasound probes**. It combines **high elasticity** with **strong mechanical resistance**, meeting the requirements of medical imaging professionals in **gynecology, radiology and urology**, while preserving optimal image quality.

Intended for **single use**, this non-sterile ultrasound probe cover is available in a **lubricated or non-lubricated version**. Its flexibility and standard diameter allow compatibility with the majority of endocavitary probes. The **rolled design** ensures fast and secure application.

Each cover is **individually packaged** with an easy-open system, helping to reduce the risk of cross-contamination during routine examinations.

Main features

- High-resistance natural latex
- Compatible with most endocavitary probes
- Non-sterile – single use
- Available lubricated or non-lubricated
- Rolled design for quick application
- Dimensions: 35 mm diameter, 200 mm length
- Individual easy-open packaging
- Packaging: box of 144 covers
