

MAXICORE - REUSABLE AUTOMATIC GUN Biopsy gun

Product description:

MAXICORE is an automatic reusable soft tissue biopsy gun with a penetration depth of 22 mm. It has been designed for the collection of quality histological specimens. The guns have an echogenic needle for precise placement under ultrasound.

Simplified sample extraction

The sample is withdrawn without having to remove the needle from the instrument.

Trigger in distal position

Used to collect a sample large enough to make a clinical diagnosis.

Note: Maxicore guns must be cleaned and sterilized after each patient. Cleaning can be done with enzymatic detergent solutions and hot water. After cleaning, the guns can also be sterilized.
