## EO WEB BY XIMEO
### Webcasting to your prescribers

## Product description:

**eoWEB** is a customizable web portal that **enables** the safe and optimized distribution of exams and their results. It provides prescribers and specialists direct access to images, results and a range of diagnostic tools.

The application is EEC 93/42 certified

**Performance and Tools:**
 Image loading is optimized to provide near instant access to images.
The **eoWEB** application offers a range of tools for measuring distance, angle or area.
This application is a great alternative to the classic sending of CDs.
Thus, it allows for significant savings.

**Storage of results:**
 Several solutions are possible.
The first solution is to store the images on a special server within the radiology center.
The second solution, outsourcing, offers the option of temporarily or permanently storing the exams on a secure external server.

**The accesses:**
 To give direct access to images and results, two types of access exist side by side.
Access limited to a single study via a link listed or written on the report allows the prescriber to view the images from this study directly.
Extended access can also be granted to regular prescribers for all of their exams. The access request is made directly from the portal and managed by the administrator. Access to the exams will then be via a login and password entered on the portal of the radiology center.

**Characteristics**

- Webcasting
