

FRONTAL LEAD APRON VX TYPE Frontal lead apron model VX

Product description:

This frontal lead apron is made up at the front of a panel which is held to the body by two panels which cross at the back and fasten in the front by a quick fastening buckle attached to straps which form an adjustable belt.

The shoulders are padded for improved comfort, an inside pocket sewn into the lining has been specially designed to hold your dosimeter.

Braces are optional, which can be fitted with wide elastic straps which attach to the hips by means of Velcro.

This "diagonal" fixation helps to spread the weight of the garment between the shoulders and the hips and considerably improves the light feel by providing ease of movement.
