

## PARKER SIGNA SPRAY Electrode contact spray

### Product description:

Parker Signa Spray contact spray is a hypoallergenic, bacteriostatic and non-staining electrode solution.

ECG / EEG "Parker Signa"

This electrode solution is the ideal electrolyte for use with muscle stimulation equipment.

This electrolyte is a superior, non-granular skin preparation. Using this electrode solution, Signa Spray, leaves no residue.

Parker Signa Spray is easy to apply and clean.

With the transparent bottle you know how much spray is left.

The use of Parker Signa ECG gel is not recommended for defibrillation.

Parker Signa Spray contact spray is a hypoallergenic, bacteriostatic and non-staining electrode solution.
