

STERILE COLLIN SPECULUM – SINGLE USE

Transparent vaginal speculum for gynaecological examinations - optimised cervical access

Product description:

The **sterile Collin speculum** is designed for **gynaecological examinations** requiring clear and comfortable access to the cervix. Intended for **single use**, it ensures maximum patient safety while simplifying clinical workflows.

Manufactured from **transparent crystal polystyrene**, the speculum provides excellent visibility of the examination area. Its **progressive opening mechanism with precise locking system** allows controlled dilation of the vaginal walls, improving both access and visualisation.

The Collin design features a **wider valve opening**, facilitating common gynaecological procedures such as **cervical smears, sampling, biopsies and hysterosonography**. Rounded valve edges ensure an **atraumatic insertion** and improved patient comfort.

Latex-free and phthalate-free, this speculum is suitable for sensitive or allergic patients. **Individually sterile packaging** eliminates the risk of cross-contamination and removes the need for reprocessing.

Available sizes:

- **Size S** – length 105 mm, diameter 27 mm – white
- **Size M** – length 115 mm, diameter 33 mm – green

Supplied in **boxes of 35 sterile speculums**.

Speculum size: 27 mm, 33 mm
