

MRI HEADPHONES Hearing protector

Product description:

Protects patient hearing and reduces MRI scanning noise.

Noise reduction rating of -27 dB.

- Ear Muffs are made completely of plastic and composite materials that are invisible to MRI scanners.
- Helps to quiet the MRI gradient knocking sounds for patients who have trouble with noise.
- Excessive noise can be harmful, cause anxiety and may lead to hearing loss.
- These ear muffs can calm MRI patients and less motion translates to better scan image quality.
- Inert to the MRI scan and will not produce any MRI artifacts.
- Can be used with sanitary stretch headphone covers.
- MRI patients will especially appreciate your going out of your way to provide comfort from the medical imaging sound made by your MRI scanner.
- Separate sideways and height adjustment of the shell.
