

CT TABLE COVER FOR CT AND MRI HARD-WEARING CT MAT PROTECTION FOR SIMPLE AND PERFECTLY HYGIENIC WORKFLOWS

Product description:

The CT Table Covers are protective sleeves made of hard-wearing PU foil and are available for CT table mats from various manufacturers. The standard table mats are simply threaded into the dedicated pockets and are then attached to the CT table using Velcro patches.

Due to the spread of MRSA and other germs, positioning aids are being investigated more and more carefully and must also withstand the frequent use of strong disinfectants. This can be very challenging, especially during CT-examination, given the high number of emergency situations or infectious patients, which also strongly affects the CT-table mat.

To meet these challenges, we have developed the CT Table Covers. The CT Table Covers are protective sleeves made of hard-wearing PU foil and are available for CT table pads from various manufacturers.

PERFECTLY HYGIENIC

Durable surface is easy to clean and disinfect. The cover and flaps protect the table and mat reliably from liquids, dirt and damages.

HIGH DURABILITY

Reduced damages and wear thanks to high quality workmanship with tear-resistant PU material and durable surface.

SIMPLE AND SAFE APPLICATION

Perfect fit and thought-out design allow installation within minutes and reduce the risk of tearing and pinching.

The CT Table Covers are already available for numerous models of all manufacturers :

- GE
- Siemens
- Philips
