

STARSYSTEM

STARSYSTEM The **STARSystem** comprises of the **STARBoard**, **STARSupport** and **STARTable** to form a complete, clinically engineered solution for right side radial access.

Product description:

Designed to work with any cardiac or radiology procedure table, the **STARSystem** is quick to install and adjust to variations in patient size. Set-up is achieved in seconds with no consumable components required.

STARBOARD

The **STARBoard** allows for rapid, effective presentation and procedural ease when considering both distal and proximal radial access. The key function of the **STARBoard** is its ability to present the patients wrist in the extended position whilst access is achieved, then simply return it to a more relaxed, medially rotated position, with the arm at their side for the duration of the procedure. Adjustments can be made at any point during the procedure beneath the sterile drapes.

STARTable

The **STARTable** provides clinicians with an adjustable work surface and protection from scatter radiation.

STARSupport

It connects to the **STARBoard** to facilitate procedures via the left radial route, while ensuring better patient comfort.
